

Sentiment Analysis Models: Lin's Concordance Correlation

CCC values with 95% confidence intervals (measures both correlation and agreement)

Model Type Closed weights Dictionary Open weights

Figure 3. Cross-lingual sentiment analysis performance using Lin's CCC. Models grouped by type (color) and sorted by CCC strength. Prompting mechanisms within clusters ordered as FR...FR (French prompt on French text), EN...FR (English prompt on French text), and EN...EN (English prompt on English text). Error bars represent 95% confidence intervals. CCC combines correlation and agreement into a single metric.
